

ANCHOR CHARTS

Each doodle note has been re-sized and saved as a 24x36" anchor chart. I print mine at the local copy shop or Staples. If you upload the file to Staples' site you can select which pages you want to print as an ENGINEERING PRINT. These cost me about \$3 a page. I would recommend printing the anchor charts that you feel will most benefit your students, and ones that you will use with each class. The 24" wide anchor chart was able to fit in my school's laminator with about an extra inch of laminate on each side – just be sure the anchor chart goes in straight. If you choose an anchor chart with practice problems, you can color and doodle on it but leave the practice problems blank. Laminate it. Then after your students have tried it, you can write the answers and explanations on the laminate with wet erase (preferred) or dry erase marker. You may need to use rubbing alcohol to remove the dry erase marker from the laminate.

Thank you so much for your support!
